Setup Instructions:

1. **Run Anaconda Prompt as Administrator**

2. **To Install MLFLOW run following commands:**

   >>conda install -c conda-forge mlflow

   >>conda install -c conda-forge/label/broken mlflow

   >>conda install -c conda-forge/label/cf202003 mlflow

3. **Create a new folder folder in C where you want to log everything:**

   >>mlflow server --backend-store-uri 'C:\temp\mlflow\localserver'

4. **Open http://127.0.0.1:5000 in your browser to access MLflow**

5. **Now Import all the necessary libraries, dataset and perform all the desired actions as stated under the assignment Task.**

6. **Now perform MLflow tracking commands as stated in the week2 file and you are ready to monitor your model using MLFLOW.**
